

National HVACR Educators and Trainers Conference

Green Awareness

Presented by Richard Benkowski
Trainer for the United Association
Technical Service Advisor for Carrier

The purpose of this session is to heighten the awareness of green concepts, systems, terminology and products.

BIO: Richard Benkowski provides technical training for Carrier equipment in Pennsylvania. In addition, he is part of the instructional training team for the United Association of apprentices and journeymen.

The word “Green” has entered our daily lives. We read about it in the news, see it on TV and hear about it on the radio, but what is it and how does it affect us?

When it comes to mechanicals, (HVAC, Plumbing and Electrical) “Green” means fuel and energy efficiency, renewable and sustainable fuel source, and water conservation.

Everyone wants to reduce energy costs while maintaining their lifestyle.

Both employers and consumers want to be Green and reduce energy consumption. They want you to be aware of the various methods employed in reducing energy consumption and conserving water. They want you to be knowledgeable about new technologies. This course is designed to provide the attendee with a basic understanding of Green concept, terminology, systems, and the latest technology.

This session will cover how to incorporate green awareness training that is designed to give attention to the specification, purchase and application of energy efficient products.
