

National HVACR Educators and Trainers Conference

Clean Dry and Tight or the Efficiency Won't Be Right The Greater the Flow, the Faster it Will Go

quality controls and ships their products from Denver, Colorado USA

**Presented by Dave Boyd
Vice President of Appion**

This session will cover how to dramatically speed the recovery and evacuation process, proper service procedures, alternative refrigerants, pit falls of POE oil and system evacuations, and the latest advances in ACR service equipment.

It will also cover electrical consumption of ACR equipment and impact on the US grid, the importance of energy efficiency, how to insure equipment runs at it's rated efficiency, and what happens to system efficiency when procedures are not performed properly.

BIO:

David Boyd has served the ACR industry for the past 35 years having held positions in various companies gaining valuable experience as refrigeration manufacturing assembly, quality assurance manager, distribution manager, sales representative, regional sales and training manager, president of sales and distribution, international training manager.
